Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 205

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 01/04/1993
Comments: Further action pending successful negotiation of an agreement. Metals and PNA's are present in the soil. These contaminants are believed to have been present in fill placed at the site. Soil sampling revealed lead up to 1000 ppm and PNA's up to 1 ppm. A PEA and a risk assessment was submitted for a low income housing project at this site. The proposal includes an apartment building with living space starting on the second story above a concrete slab which covers the entire site. The PEA and associated risk assessment show that direct contact with soil containing metals and PNA's is the pathway which poses a potential health risk. The proposed project minimizes exposure by direct contact with a physical barrier and a site management plan including a deed restriction. The approval by the Department is subject to agreement on the terms of the deed restriction and the other conditions enumerated in the letter sent to the Redevelopment Agency.

Comments: Excavation and off-site disposal of lead impacted soil was performed at both Buildings 108 and 122 in accordance with the "Presidio-wide Lead-based Paint Soil/Investigation Work Plan." (Work Plan)(October 2008). Although these buildings are not designated for residential use, the Trust has selected the residential/eco-buffer zone cleanup levels for comparison with soil sample results. This corresponds to an average lead concentration of 370 mg/kg, with a maximum not to exceed 400 mg/kg. At Building 108, the initial lead concentrations ranged from 88 mg/kg to 550 mg/kg. After soil excavation and off-site disposal all confirmation samples were below 400 mg/kg. At Building 122 initial lead concentrations ranged up to 1,800 mg/kg. Similarly, after soil excavation and off-site disposal, all confirmation sample results were below 400 mg/kg for lead. Based on DTSC staff review of the available documentation, No Further Action Request, and DTSC's April 24, 2012 site visit, DTSC has determined that No Further Action is warranted with respect to lead-based paint in soil at Buildings 108 and 122.

Comments: DTSC's 6/27/2013 letter concurring based upon staff review of the available documentation, No Further Action request and DTSC's April 24, 2012 site visit, no further action is warranted with respect to lead-based paint at Buildings 681 and 683. After soil excavation activities were completed, subsequent confirmation samples contained lead below the residential/eco-buffer zone cleanup level of 300 mg/kg. Excavation of soil impacted with lead at Building 683 extended to a "play area" at a distance beyond where lead-based paint is known to fall from a building. DTSC concurs that the lead is most likely not associated with lead-based paint from Building 683.

Comments: DTSC concurs that no further action is needed at Building 851 with respect to lead based paint in soil. Remaining soil at building 851 meets the human health lead level of 400 mg/kg. Due to remaining exceedances of the ecological special status lead level of 160 mg/kg, a land use notification will be established for Building 851. Finally, under separate cover, DTSC will direct the Presidio Trust to address the fill material in the vicinity of Building 851.

Comments: Buildings 727, 729-734, 777, and 779-791 are located within an area previously identified as an ecological buffer zone. Therefore all soil sample results around these buildings were required not exceed the applicable lead level of 300 mg/kg. Based on our review of the available documentation and NFA request, DTSC has determined that No Further Action is warranted with respect to lead-based paint in soil at Buildings 727, 729-734, 777, and 779-791.

Comments: Of the 543 soil samples collected from around the buildings, 3 detected lead concentrations exceeding 160 mg/kg (two along the eastern side of Building 1711 as high as 1,200 mg/kg and the other along the western side of Building 1713 at 655 mg/kg). Soils exceeding the applicable lead level were removed as a part of property improvements in accordance with the procedures approved in the Presidio Lead-Based Paint in Soil Workplan. Based on our review of the available documentation and NFA request, DTSC has determined that No Further Action is warranted with respect to lead-based paint in soil at Buildings 1522, 1523, 1529, 1531, 1538, 1539, 1547, 1548, 1551, 1554, 1561, 1564, 1588, 1591, 1592, 1599, and 1703-1713 at the Presidio of San Francisco, California.

Comments: Soils exceeding the applicable lead level for residential reuse around Buildings 1801, 1803, 1806, and 1808 were removed as a part of property improvements in accordance with the procedures approved in the Presidio Lead-Based Paint in Soil Workplan. The property improvements implemented were backfilled with soil previously-approved by DTSC for the Presidio Lead-Based Paint in Soil program. Based on our review of the available documentation and NFA request, DTSC has determined that No Further Action is warranted with respect to lead-based paint in soil at Buildings 1801, 1802, 1803, 1806, and 1808 at the Presidio of San Francisco, California.

Comments: Buildings 530-539 required comparison of soil sample results to the applicable level for unrestricted residential reuse. All of the 120 soil samples collected from around the buildings detected lead concentrations below the applicable lead level. Therefore, based on our review of the available documentation and NFA request, DTSC has determined that No Further Action is warranted with respect to lead-based paint in soil at Buildings 530-539.

Comments: Based on staff review of the available documentation, No Further Action Request, and DTSC's April 24, 2012 site visit, DTSC has determined that No Further Action is warranted with respect to lead-based paint in soil at Buildings 34, 38, 39, 63, 67, 68, 130, 135 and 1028. Soil excavation was not required at Buildings 34, 38, 63, 67, 135 and 1028. Soil excavation was required at Buildings 39, 68, 130 to achieve the residential/eco-buffer cleanup goal set for this Site of an average lead concentration of 370 mg/kg, with a maximum not to exceed 400 mg/kg.

Comments: Excavation and off-site disposal of lead impacted soil was performed at both Buildings 108 and 122 in accordance with the "Presidio-wide Lead-based Paint Soil/Investigation Work Plan." (Work Plan)(October 2008). Although these buildings are not designated for residential use, the Trust has selected the residential/eco-buffer zone cleanup levels for comparison with soil sample results. This corresponds to an average lead concentration of 370 mg/kg, with a maximum not to exceed 400 mg/kg. At Building 108, the initial lead concentrations ranged from 88 mg/kg to 550 mg/kg. After soil excavation and off-site disposal all confirmation samples were below 400 mg/kg. At Building 122 initial lead concentrations ranged up to 1,800 mg/kg. Similarly, after soil excavation and off-site disposal, all confirmation sample results were below 400 mg/kg for lead. Based on DTSC staff review of the available documentation, No Further Action Request, and DTSC's April 24, 2012 site visit, DTSC has determined that No Further Action is warranted with respect to lead-based paint in soil at Buildings 108 and 122.

Comments: DTSC's 6/27/2013 letter concurring based upon staff review of the available documentation, No Further Action request and DTSC's April 24, 2012 site visit, no further action is warranted with respect to lead-based paint at Buildings 681 and 683. After soil excavation activities were completed, subsequent confirmation samples contained lead below the residential/eco-buffer zone cleanup level of 300 mg/kg. Excavation of soil impacted with lead at Building 683 extended to a "play area" at a distance beyond where lead-based paint is known to fall from a building. DTSC concurs that the lead is most likely not associated with lead-based paint from Building 683.

Comments: Pursuant to the MOU, DTSC has reviewed a Phase I Environmental Assessment for the S.F. Towers Project, San Francisco, for the Cal-Mortgage Loan Insurance (Cal-Mortgage). The subject property originally contained a number of buildings, primarily commercial structures, which have been demolished. The Episcopal Homes Foundation is proposing to construct a residential development on the subject property. A special letter report was prepared by DTSC for Cal-Mortgage and concluded that no action was needed for this property beyond the proposed cleanup of the underground fuel storage tank; there is no other contamination on the property.

Completed Date: 03/27/1998
Comments: Pursuant to the MOU, DTSC has reviewed two Phase Preliminary Environmental Assessments and a geotechnical Investigation for the Scott Street Senior Housing Complex, Inc. (SSSHC). The subject property currently, composed of eight separate contiguous parcels, contains several structures presently used for various office, commercial and residential uses plus a parking lot. One of the existing structures will be retained, remodeled and incorporated into the proposed new complex; another will be moved; and the third will be demolished. SSSHC is proposing to develop the parcels into an assisted-living facility for the elderly and health center. A Supplemental Phase I Environmental Report was prepared by DTSC and concluded that no action was needed for this property; there is no contamination on the property.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 02/18/1987
Comments: Completed Site Screening. During a Department of Health Services (DHS), predecessor to the Department of Toxic Substances Control (DTSC), site inspection in 1982, seven drums containing material were discovered on site inside a sheetmetal-sided, cement floored factory building. One drum contained metals (chromium 495 ug/g, copper 82100 ug/g, nickel 25400 ug/g, lead 220 ug/g, and zinc 5590 ug/g). Inside one of the buildings, surface soil from a crack in the cement, fifteen feet from the drums contained 2900 ug/g copper, 109 ug/g lead, and 3680 ug/g zinc. The samples were also tested for pesticides, which were not detected. The drums were removed and properly disposed. The site was re-inspected in 1984 by DHS. DHS determined in 1985 that sufficient remedial measures had been achieved since the site is located over impermeable bay mud, there are no drinking water sources nearby, the source (seven drums) were removed, and migration of metals was not an issue. The site was removed (delisted) from the State Priority Remedial List (SPRL) in 1985. Bay West Development Company then started development of the site by demolishing the existing buildings and rebuilding the office buildings, exhibit hall, and parking garage.

Background Info: This site is at the corner of 7th Street and Townsend in San Francisco, California. The Site is bounded by 7th Street to the east, Brennan Street and Highway 101 Skyway to the north, 8th Street to the west, and Townsend on the south. Currently, the Concourse Exhibit Hall, the Townsend Center, parking garage, and the Macromedia (SEGA) office building occupy the two-acre site in an industrial/commercial area. The San Francisco Bay is one-quarter mile to the east. Consolidated Iron Works (CIW)(also known as (a.k.a.) Consolidated Iron and Metal) operated a scrap and semiprecious metal recycling and packaging operation from 1950 to 1965. Independent Paper Stock, a paper recycling business, operated at the site from 1965 to 1974. The site was vacant from 1974 to 1982. Bay West Development Company (a.k.a. Showplace Square) acquired it in 1983. The old Western Pacific Railroad Freight Depot, adjacent to CWI was also acquired and added to the site for development. It is part of the Townsend Center and is now known as the Concourse Exhibit Hall. Currently, the site is an office building, parking garage, and exhibit hall with the area covered by buildings or asphalt.

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

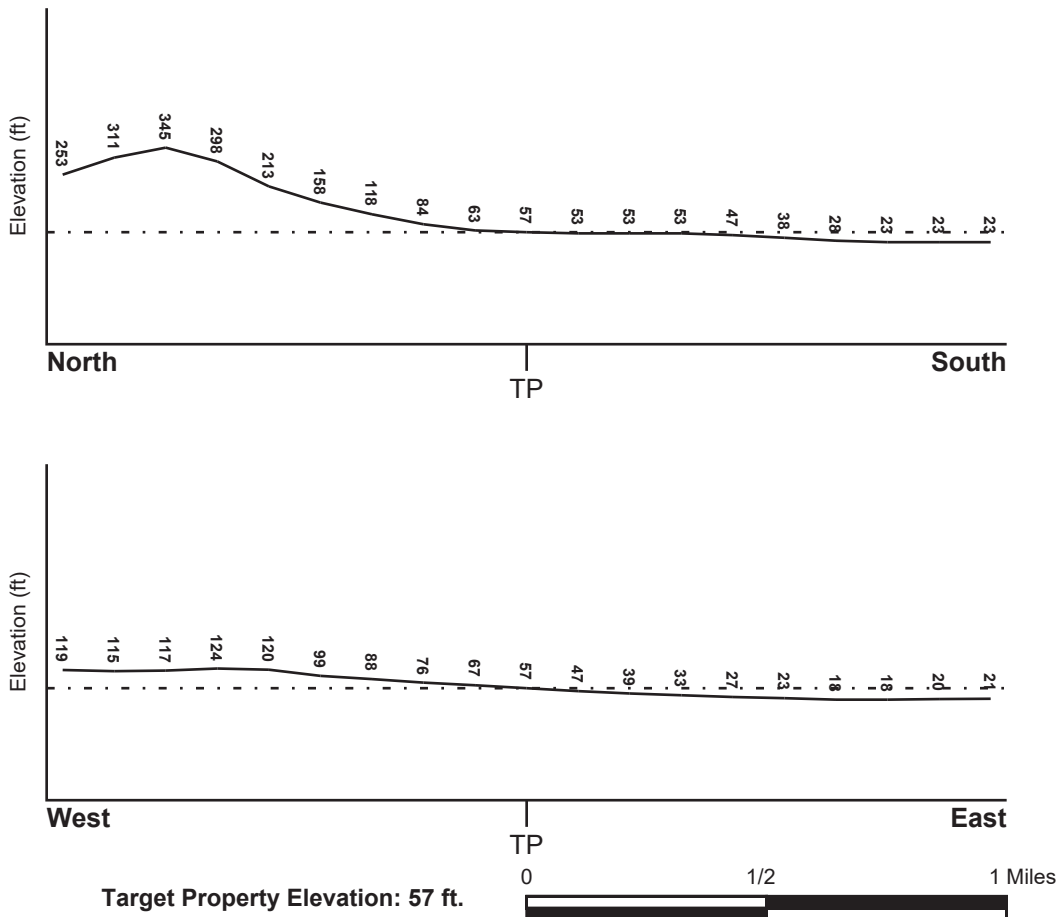

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Experience Summary

Ms. Xiao serves as a Staff Assessor for Partner Engineering and Science, Inc. (Partner), performing Phase I Environmental Site Assessments on a variety of property types in accordance with EPA's All Appropriate Inquiry (AAI) and the American Society of Testing and Materials (ASTM). She has worked as a project assessor on sites involved with initiatives for transfer, sale, and redevelopment.

Ms. Xiao's responsibilities include conducting Freedom of Information Act (FOIA) agency file reviews, detailed site-inspections, in-depth historical reviews, and preparation and submittal of reports. She has conducted numerous projects on high rises, gas stations, industrial facilities, and large retail complexes throughout the San Francisco Bay and greater Northern California region. Many of these reports have had known manufacturing/industrial use and associated underground storage tanks.

Project Experience

Metal Parts Manufacturer, Hayward, California. Ms. Xiao performed a Phase I Environmental Site Assessment for a metal parts manufacturer that had been in operation from the late 1970s until 2017. She recommended subsurface investigations due to prolonged use and large quantities of hazardous materials stored onsite. The results of the Phase II Environmental Subsurface Investigation indicated high concentrations of contaminants in the soil and groundwater, leading the property to become an active cleanup site.

Construction Materials Storage Yard, Livermore, California. Ms. Xiao performed a Phase I Environmental Site Assessment for 3-acre materials storage yard that was formerly utilized as a truck and trailer storage, maintenance, and salvaging facility from the 1970s to the 2000s and that had residual contamination after site mitigation.

Art Studio and Gallery, Oakland, California. Ms. Xiao performed a Phase I Environmental Site Assessment for a warehouse that was utilized as an art studio and gallery. She identified a past foundry that had operated on the site from the 1940s to the 2000s and recommended a subsurface investigation for potential metal contamination.

Multi-Family Apartment Complex, Fresno, California. Ms. Xiao performed a Fannie Mae Phase I Environmental Site Assessment for a 164-unit multi-family apartment complex.

Commercial Shopping Center, Hayward, California. Ms. Xiao performed a Phase I Environmental Site Assessment for a large multi-building shopping center with former tenants including a dry cleaner and multiple adjacent gasoline service station leak cases.

Multi-Building Commercial Complex, Hayward, California. Ms. Xiao performed a Phase I Environmental Site Assessment for a commercial complex that was occupied by auto sales, auto body, and auto repair tenants.

Retail Store, San Francisco, California. Ms. Xiao performed a Phase I Environmental Site Assessment as part of a large Kelly Moore portfolio and identified a former onsite underground storage tank.

Research and Development Facilities, Petaluma, California. Ms. Xiao performed a Phase I Environmental Site Assessment for a multi-building complex occupied by research and development facilities.
